

Profiling Jobs and Competencies using the tekomp Competence Framework

tcworld conference

Stuttgart, Novembre 9, 2016

Prof. Sissi Closs - Karlsruhe University of Applied Sciences

**Dipl.-Ing. Jürgen Sapara – tekomp Advisory Board
Training & Education**

University

- Professor at Karlsruhe university since 1997
- Course Director Communication and Media Management (MSc)

Company

- CEO of C-Topic Consulting GmbH
- Head of advisory board FCT AG

tekom

- Committee Chairman for qualification counsel at Advisory Board Training & Education

tecteam

- Senior Consultant (focus on organization, process modelling & optimization)
- Manager Consulting

before

- Head of Documentation
- Internal Consultant
- Chief editor at technical magazine

Why is a competence framework necessary?

Demand of the industry: Specially trained and qualified staff with specific competencies is required, esp. for international companies

- **A constant demand for Technical Communicators (EU figures)**
 - 1.4% of all employees in the industry sector
 - 3.6% of all employees in the software sector
- **Late entrants with background in engineering and translation**

There is a need for a better understanding of the profession and its competence requirements

- The occupational profile and roles are unclear
- The competencies and qualifications for Technical Communicators are unclear

What is the tekomp Competence Framework and who is it for?

Describes the occupational profile and potential job profiles in technical communication

Who is it for?

- companies of any kind
- technical communication employees
- people who are interested in entering the profession
- institutions of higher education
- training institutes

Definition of Competencies

“Competencies are identified to clearly define the essential functions of the job.”

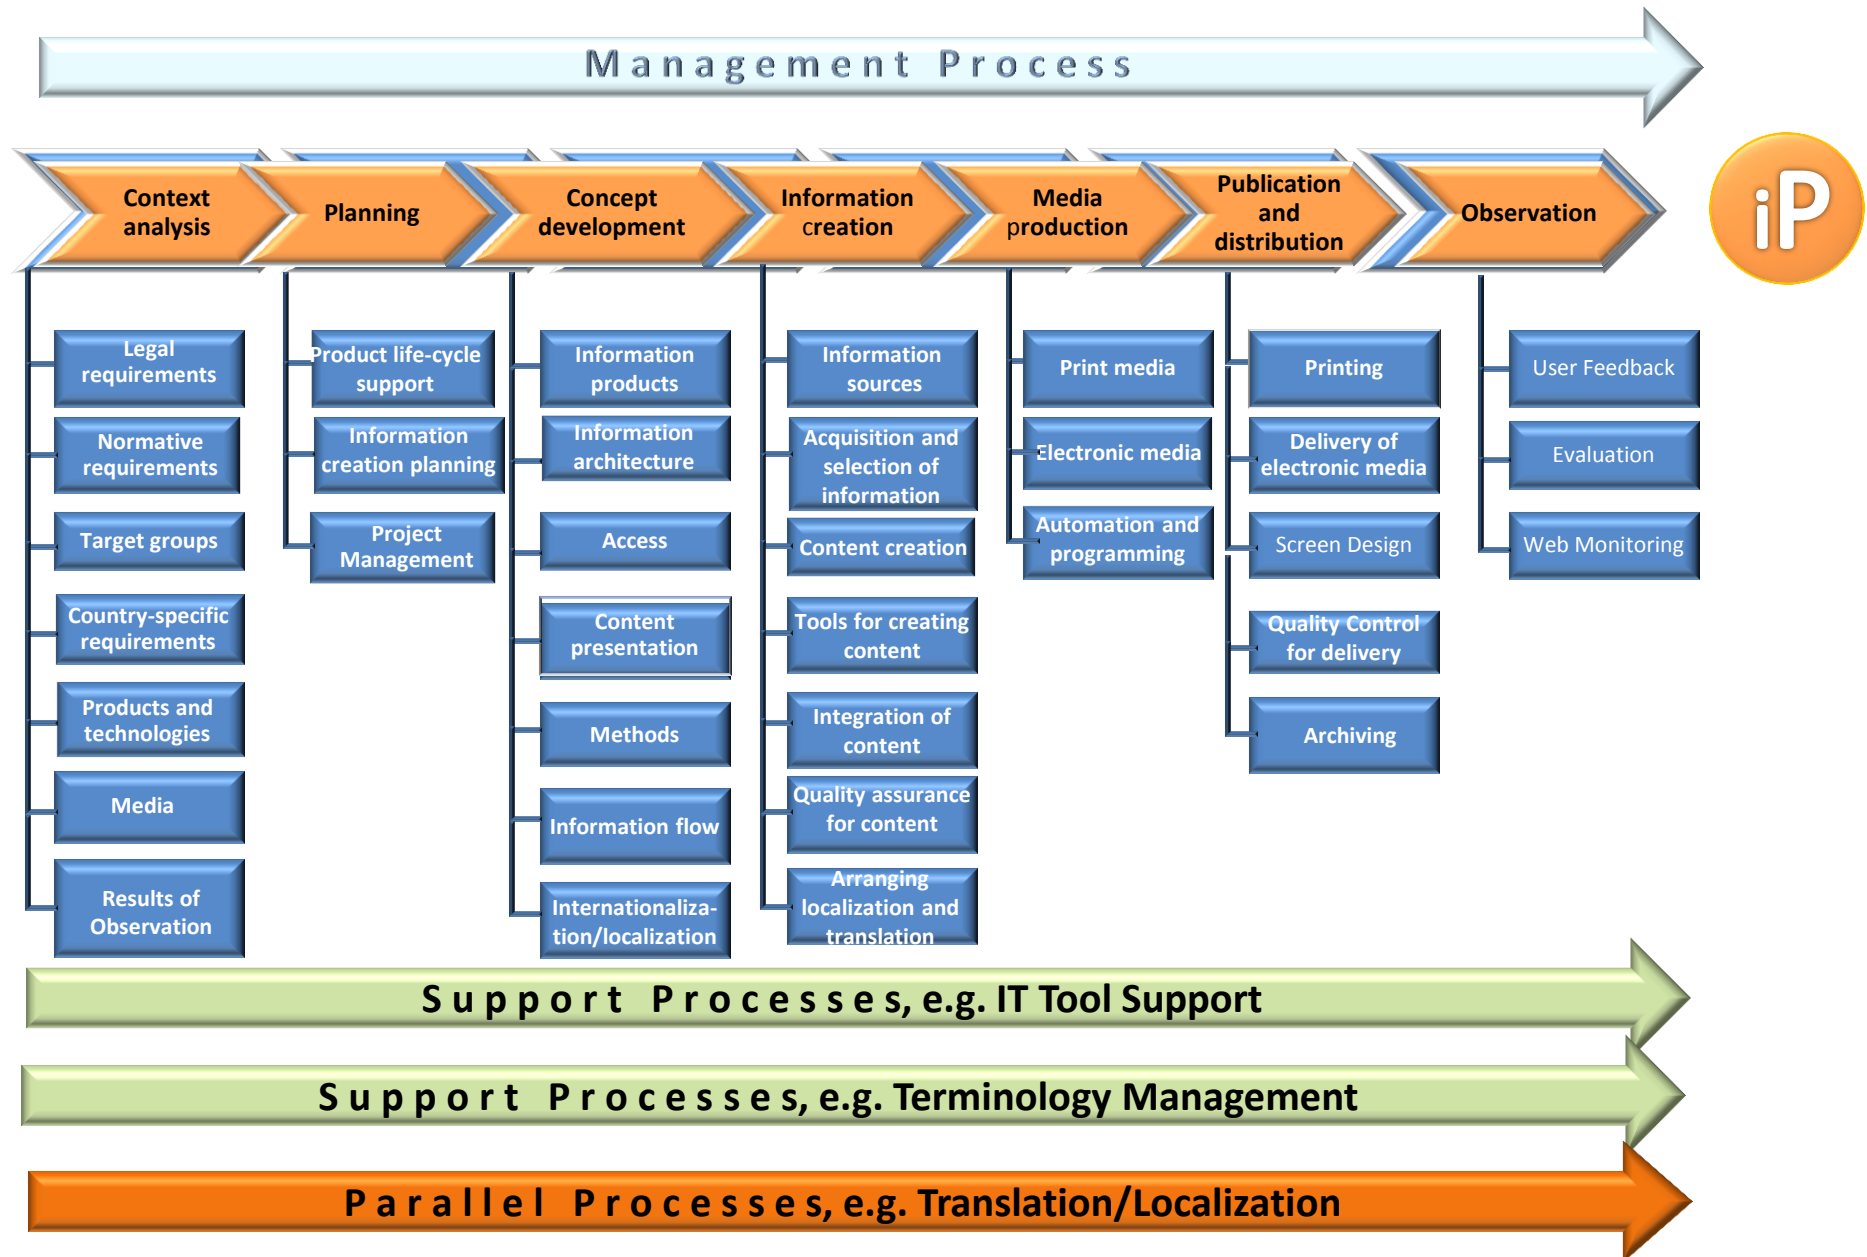

1. Job profile: Tasks to perform
2. Competencies for a job: Knowledge, skills, abilities, personal characteristics and other “worker-based” factors that are necessary to perform a certain task
3. Overall Competencies of persons: Differentiates superior performance from average performance

The process of developing information products

Tasks:

What do we have to do to develop information for use and what are the process steps?

Development of Information Products (iP)

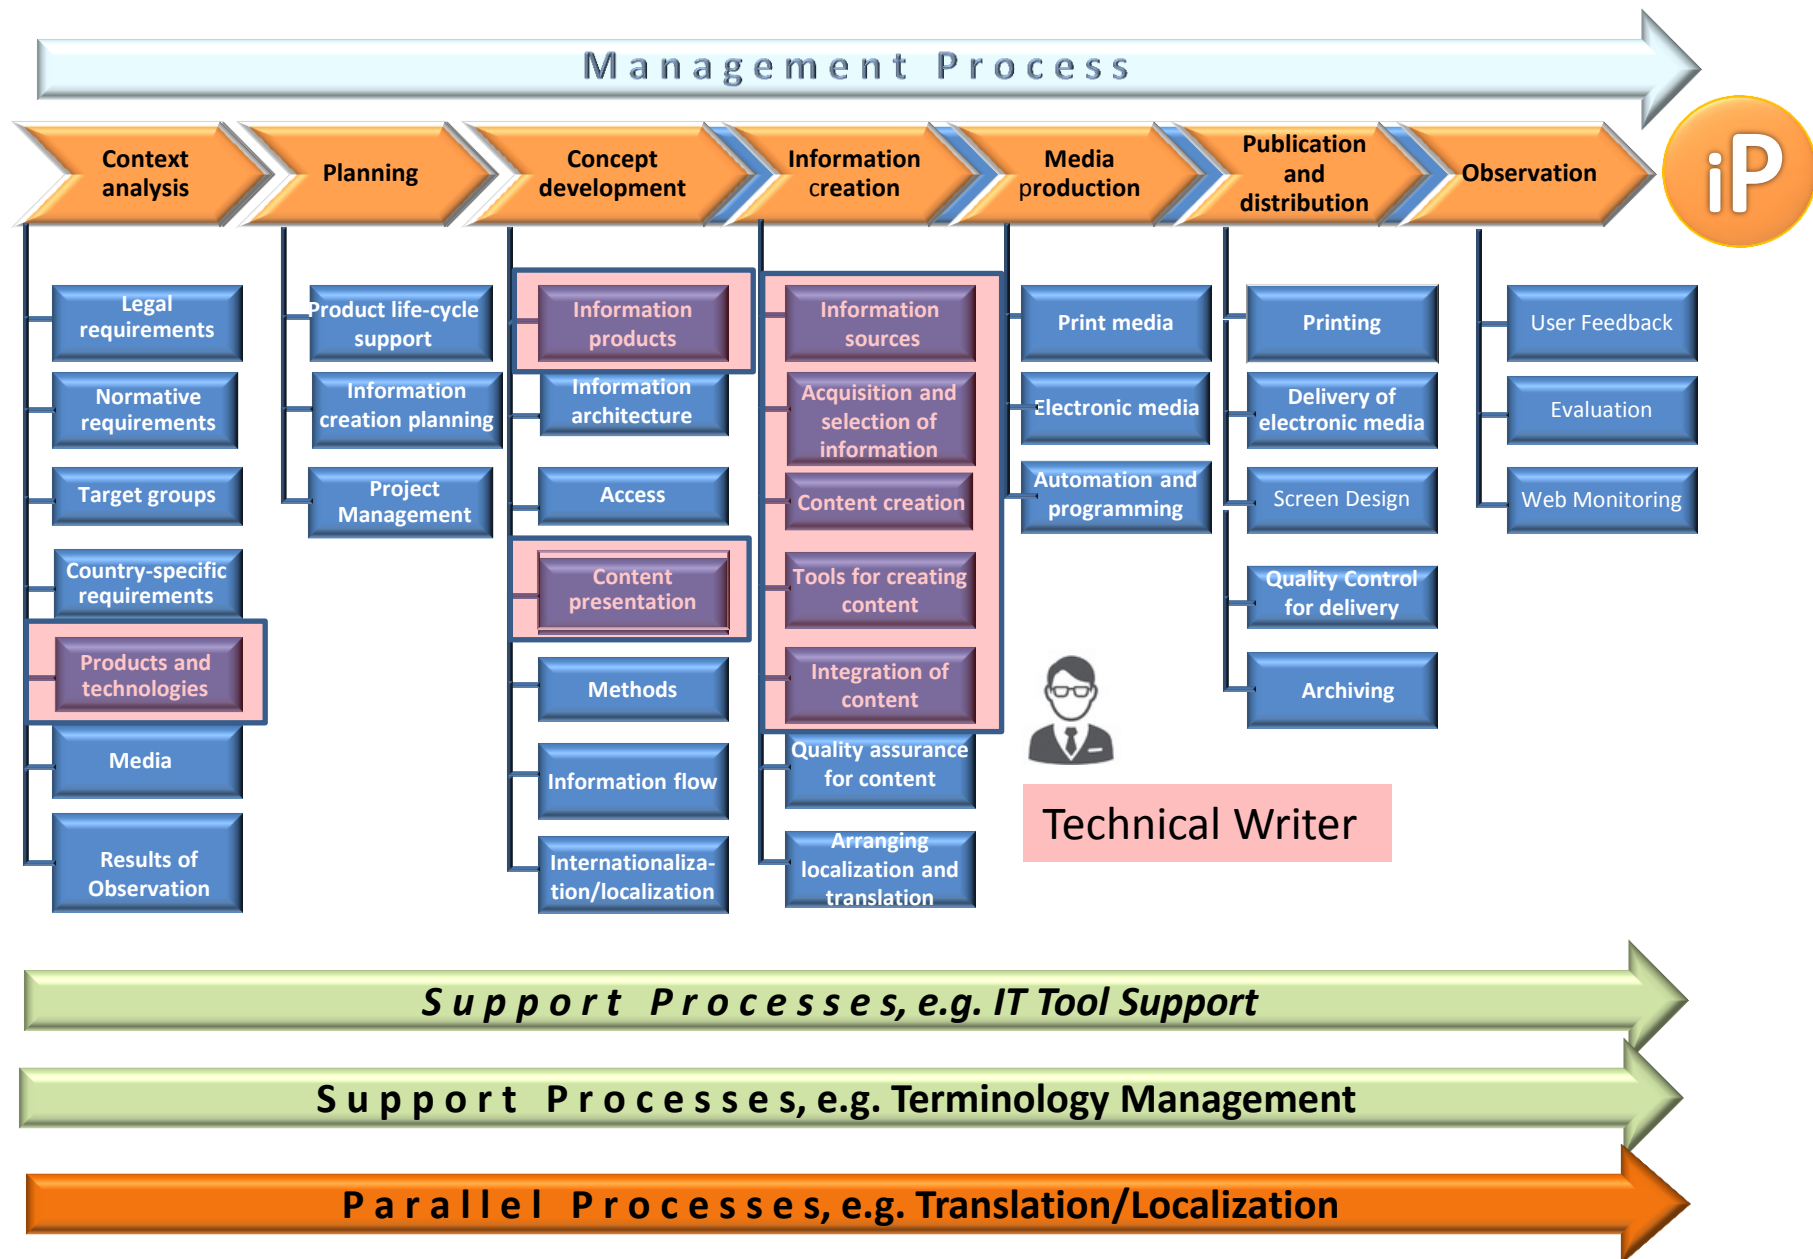

Technical Communicator

Different job profiles

What do these people do and what do they have to do and to know?

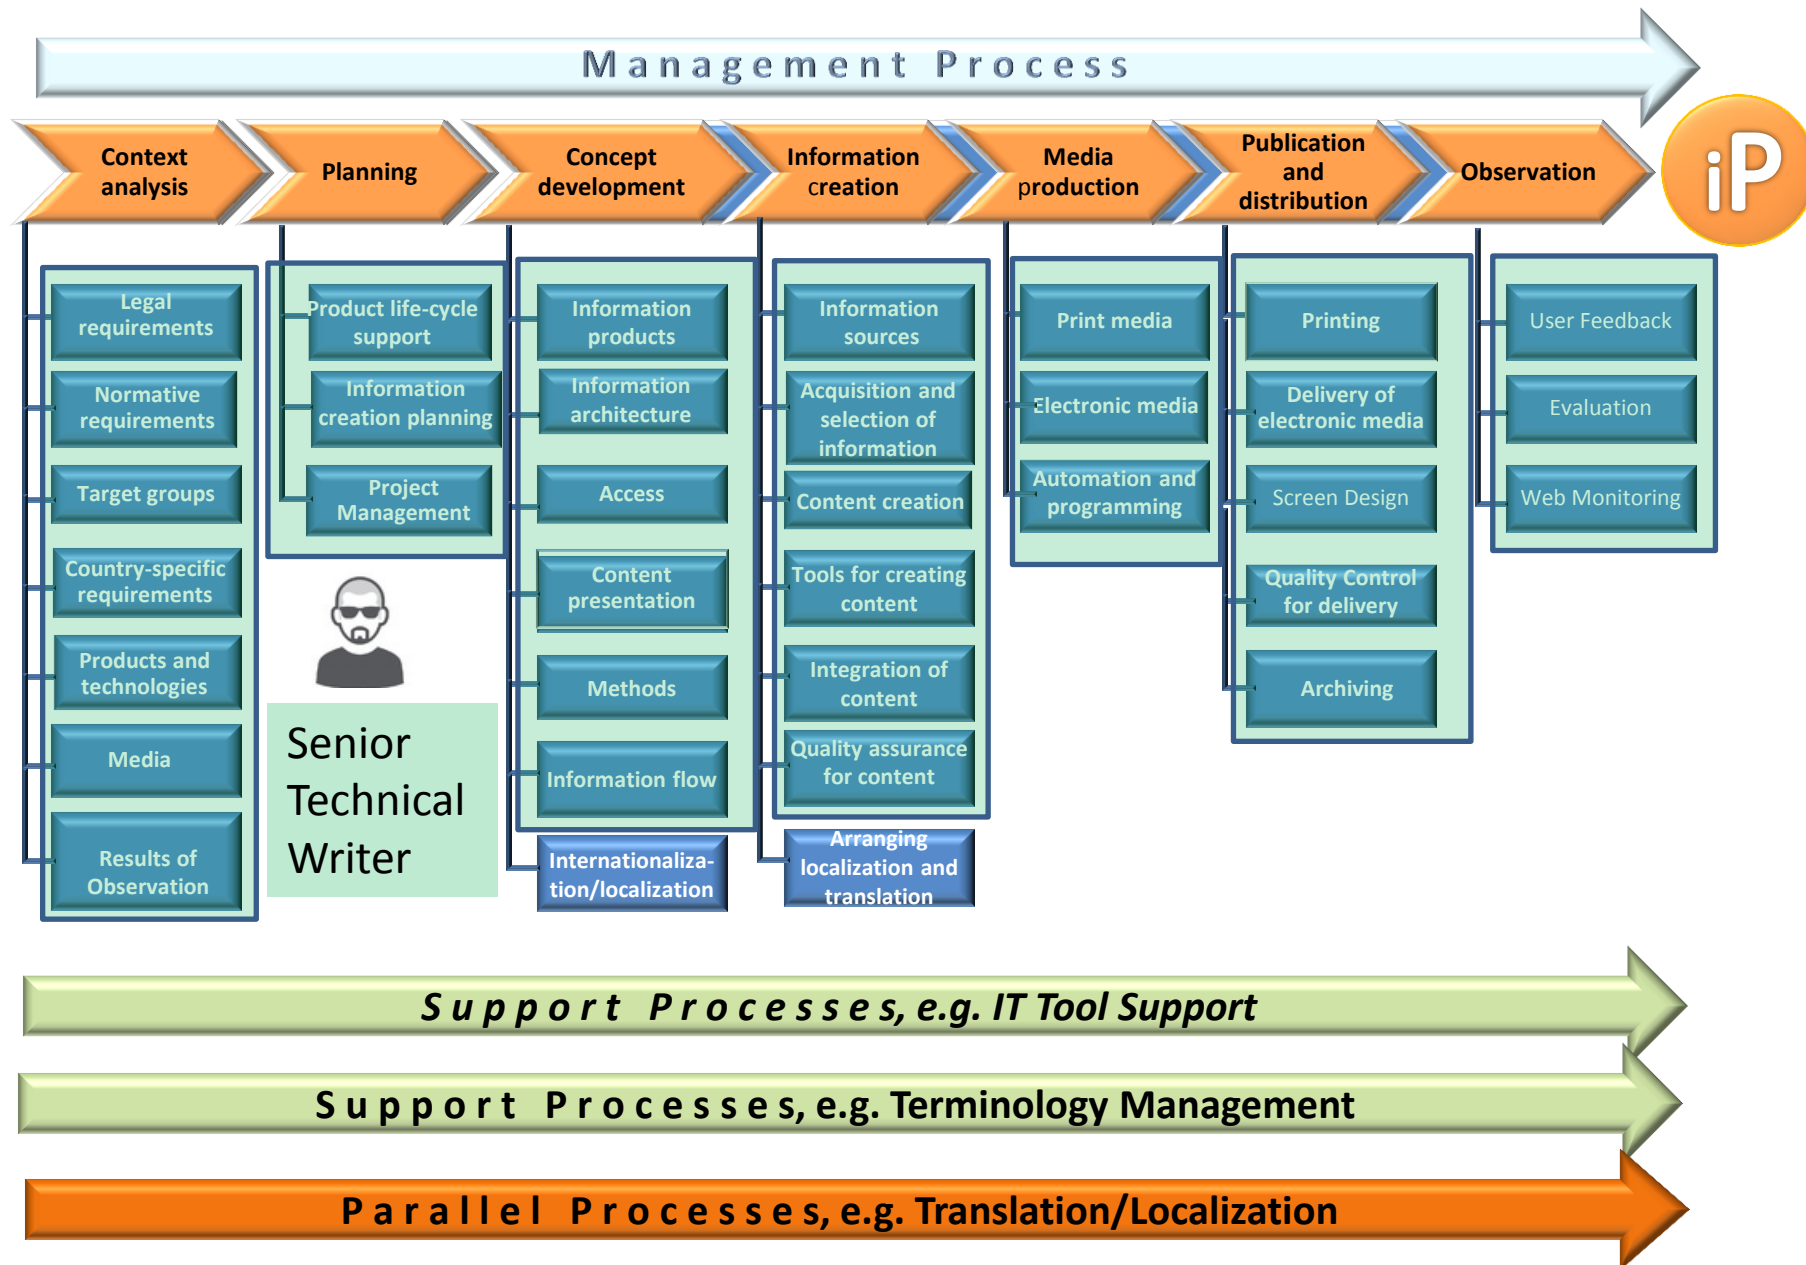

Experience: 2-4 years

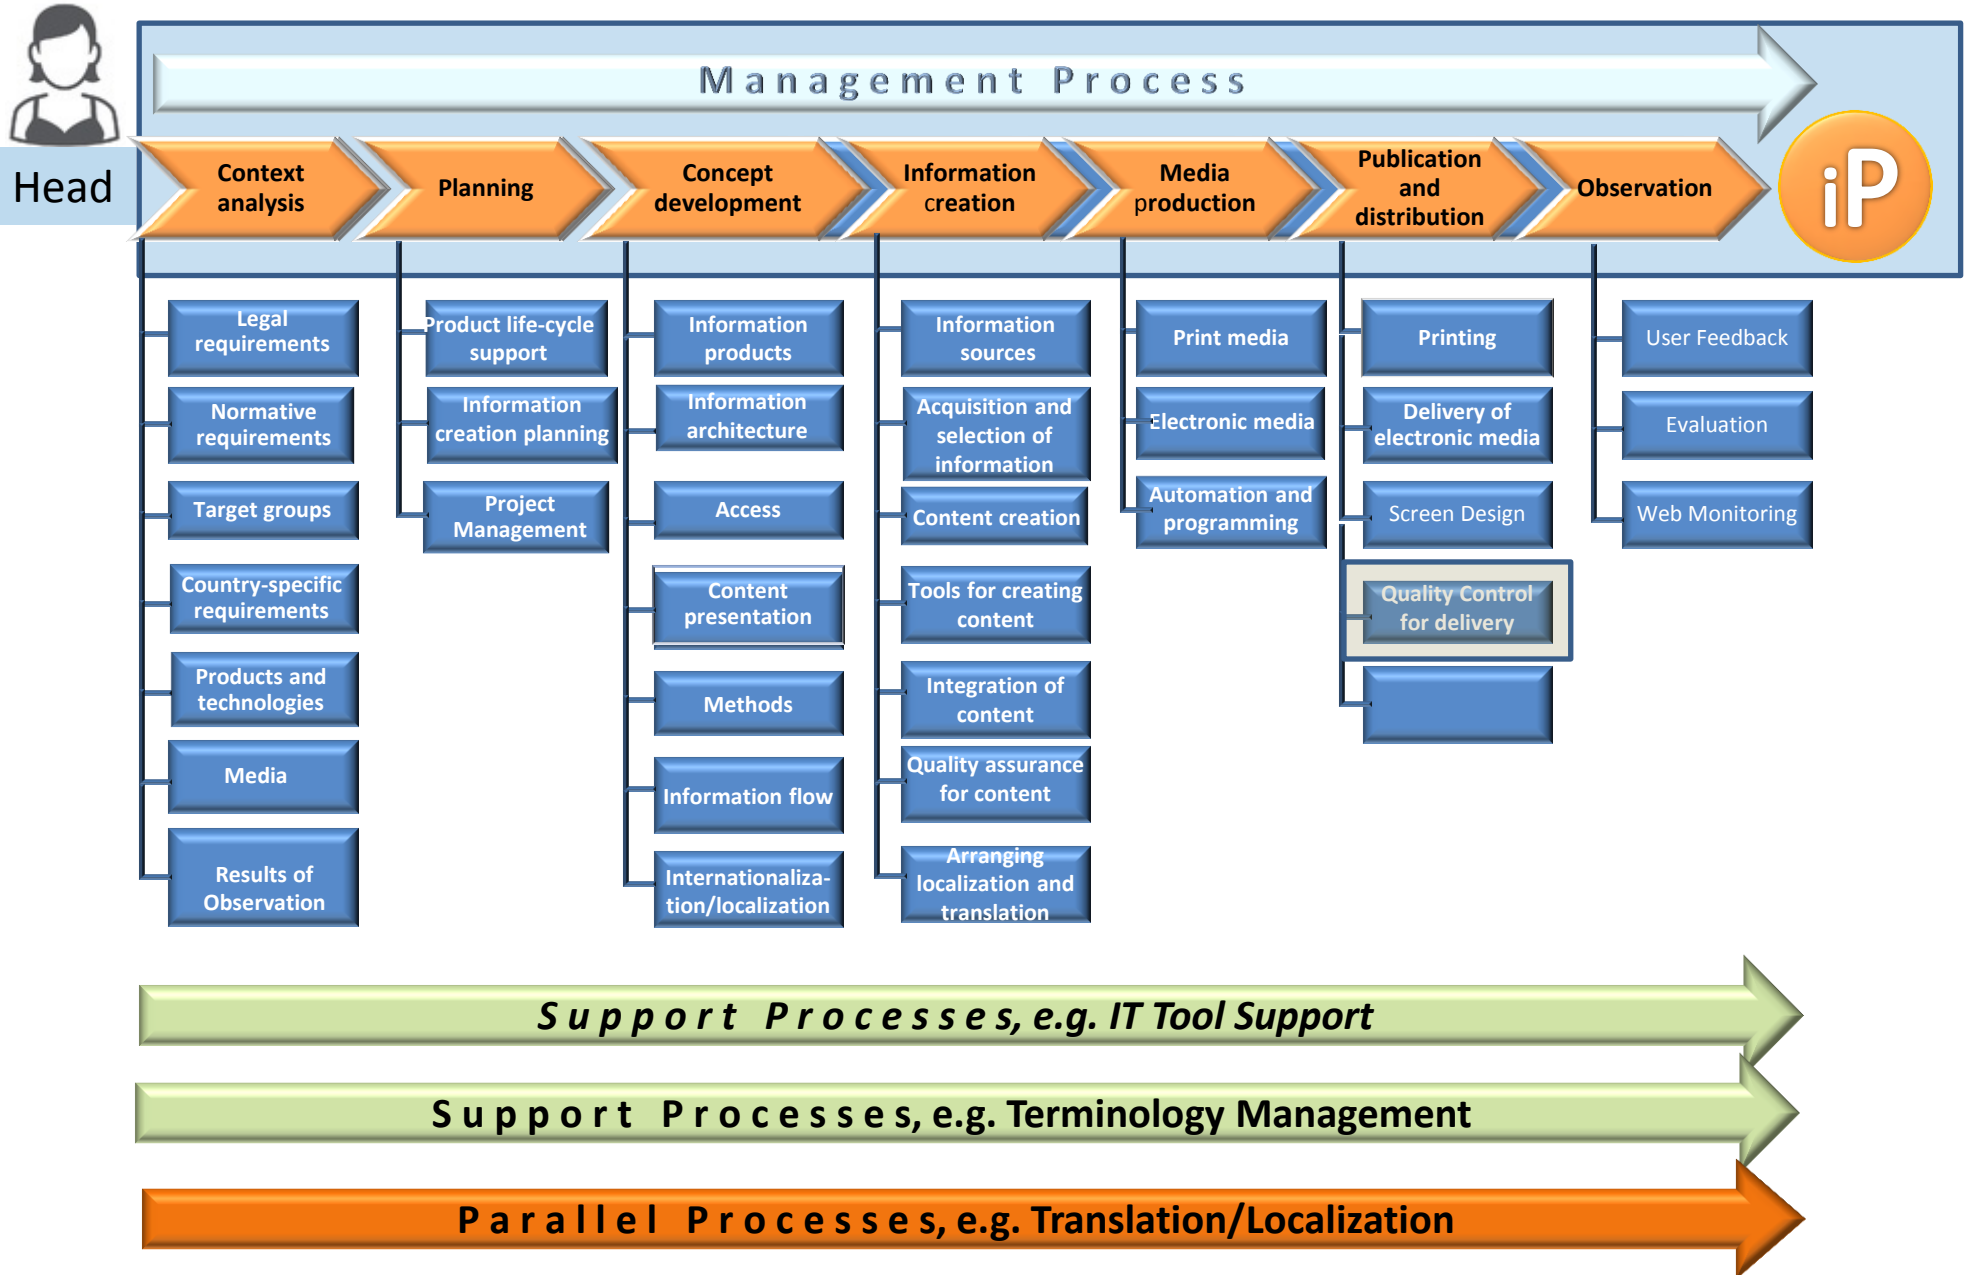

- Works with internal teams to obtain an in-depth **understanding of the product and the documentation requirements**
- **Is able to extract technical information** from software design documents
- **Interviews** subject matter experts to extract required information
- **Analyzes existing and potential content**, focusing on reuse and single-sourcing opportunities
- **Writes easy-to-understand user interface text**, online help and developer guides
- **Contributes to technical writing processes and standards for the team**

Experienced / Senior Technical Writer

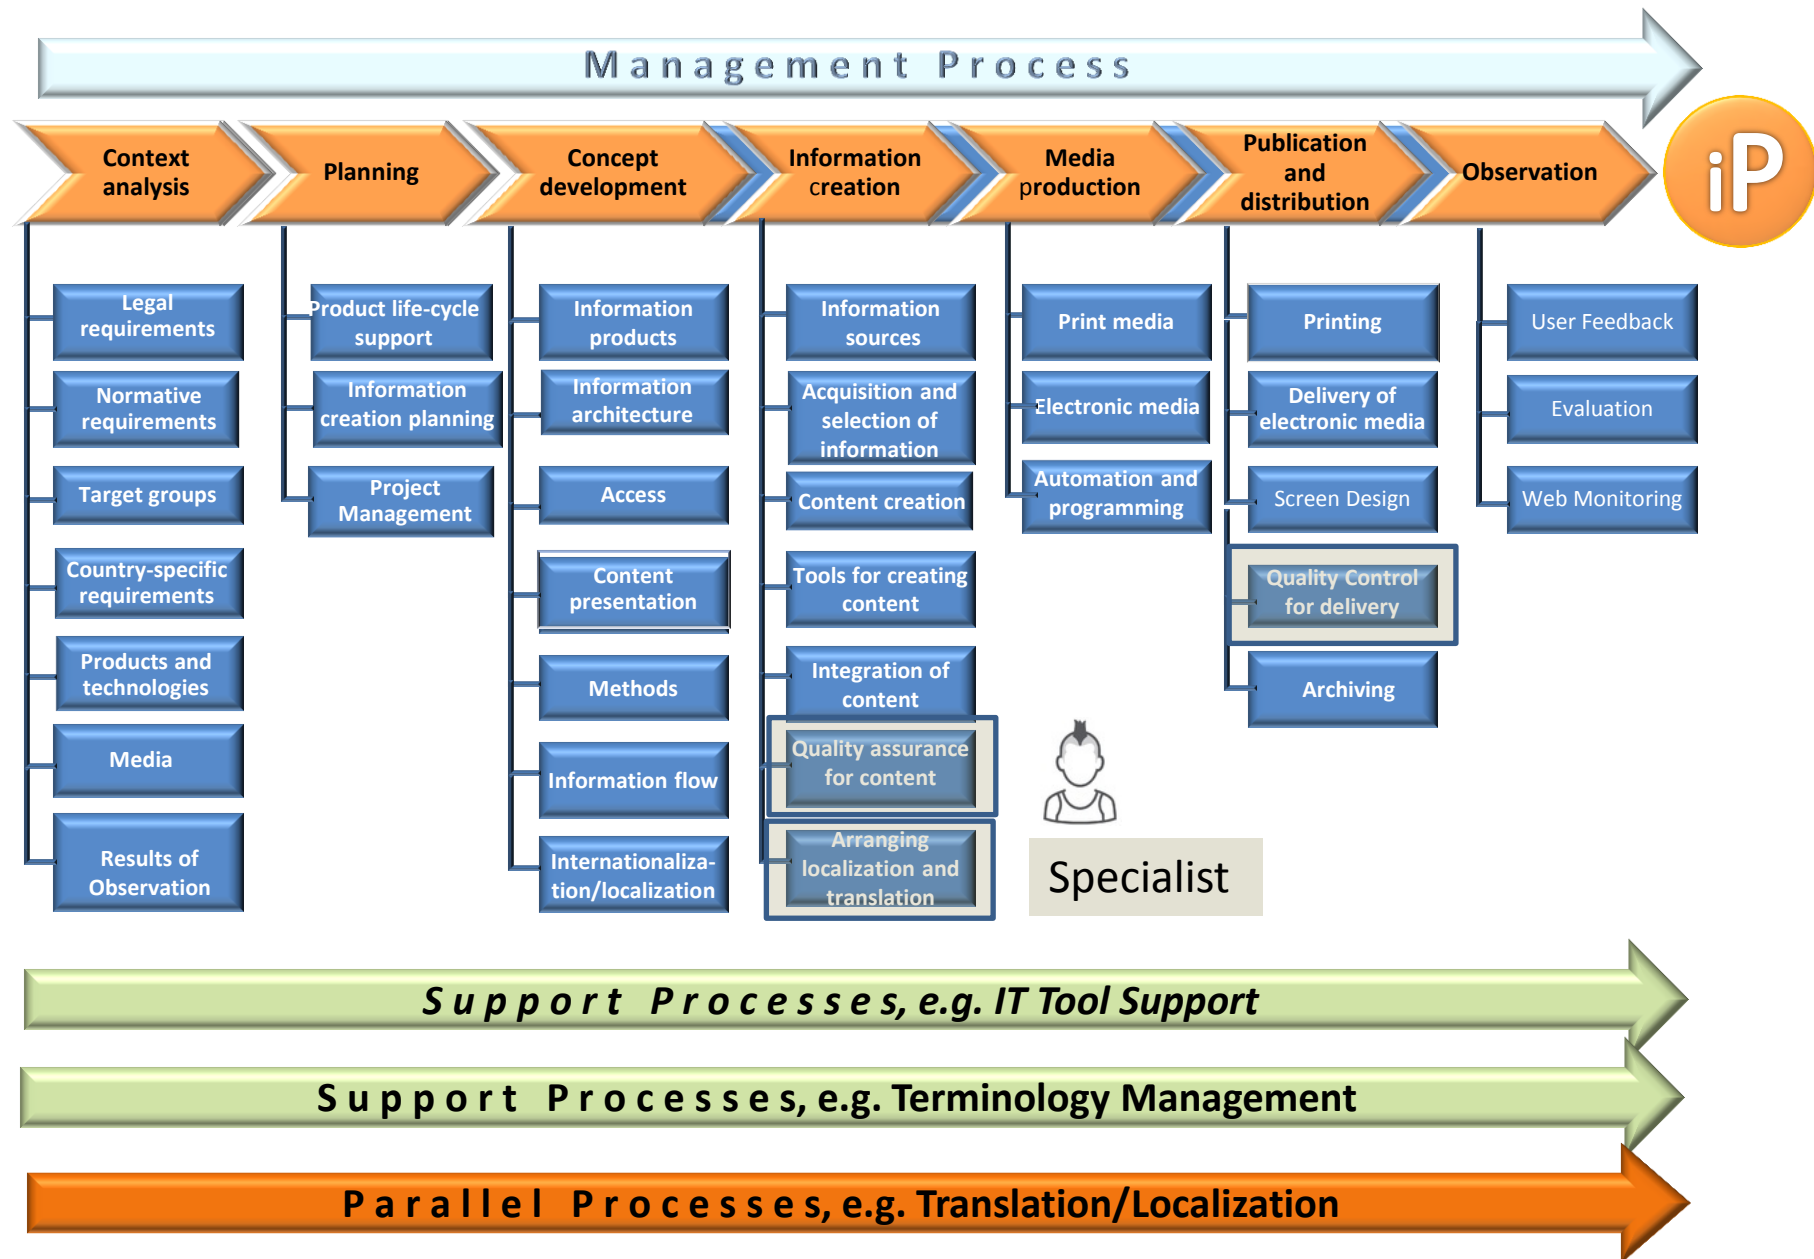

-
- **Experience: 5-9 years**
 - **Understands customer requirements** and **product specifications** to collect information for writing manuals
 - **Designs and develops written** and/or visual product-related manuals for print, web, and mobile devices
 - **Analyzes existing content** to identify and bridge documentation gaps
 - Identifies and resolves any technical writing/documentation-related **issues**
 - **Drafts Standard Operating Instructions to standardize layout and format**, so that technical descriptions and instructions can be readily understood by the users
 - **Adheres to defined technical writing standards**, best practices, style guides, templates, scripts, style sheets, and graphic libraries
 - **Reviews and tests the product** for consistency with regards to documentation, identifying problems and suggesting revisions
 - Works and acts as liaison with other technical writers, multimedia, technology team and **reviews their work**
 - **Provides input and guidance regarding time estimates for planning and deploying documentation solutions**

Specialist Proofreading and Quality Assurance

- Performs **editorial tasks** to support technical software documentation
- Achieves the following **quality goals** for **published content**:
 - **High** level of accuracy in grammar, vocabulary, and punctuation
 - Adherence to the **standards of American English**
 - Consistent application of the **editorial standards** of the organization
 - Consistent use of the **terminology standards** of the organization

Develop your personalized skills profile!

- **By company managers and personnel departments**
 - For drawing up specialist job profiles and roles
 - For targeted personnel recruitment and writing job advertisements
 - For HR development and targeted employee competency development
- **By further education institutes and training providers, including universities**
 - For developing new training offerings and curricula
- **By persons interested in further education**
 - For identifying and defining individual further education content and objectives
 - For developing individual, needs-based further education concepts

For tekomp qualification consulting

- For gap analysis and identifying individual further education needs

Level 1: Areas of competence

Context analysis

▼ 1. Context analysis

Before creating an information product, it is necessary to analyze the requirements which it must meet. Context analysis determines the underlying conditions and the requirements that are placed on an information product by its context.

Context analysis is a preparatory process phase. One distinctive feature is the fact that not only internal sources but mainly sources outside the company are evaluated. In doing so, overarching aspects such as legal and normative requirements, markets or target groups are investigated. Context analysis does not have to be performed for every documentation product but does need to be performed regularly at scheduled intervals or when modifications have been announced. The results of observing the information product are evaluated in the context analysis and their consequences for creating information products are deduced from these results. Context analysis and its results are interpreted specifically to the documentation, depending on the nature of the information product and the underlying conditions.

A context analysis examines:

- Legal requirements
- Normative requirements
- Target groups
- Country-specific requirements
- Products and technologies
- Media and information technology
- Results of observation of the information product

The results of the context analysis are fed into the concept for an information product and also into aspects such as media development, publication and distribution.

7

Description / Summary of the area of competence

Level 2: Fields of competence

Country-specific requirements

▼ 1.4 Country-specific requirements

Information products for different countries and markets must meet country-specific requirements. These include:

Technical requirements

Culturally-specific aspects of the target group

Legal and normative requirements

Taking these requirements into account in the information product is relevant when it comes to placing the product on the market, product compliance and usability. Information on this can be obtained directly from destination countries, from technical requirements and product specifications, from contracts or by research.

The resulting requirements placed on information products must be taken into account during concept development and be implemented when the product is produced.

- ☐ ▶ 1.4.1 Technical requirements
- ☐ ▶ 1.4.2 Culturally-specific aspects of the target group
- ☐ ▶ 1.4.3 Legal and normative requirements

27

Describe the professional and workplace requirements for developing information products

Level 3: Thematic blocks

Culturally-specific aspects of the target group

☐ ▶ 1.4.1 Technical requirements

☐ ▼ 1.4.2 Culturally-specific aspects of the target group

- ☐ Culturally-specific differences in the way that information is processed (e.g., characters, colors, images, reading direction)
- ☐ Cultural aspects of pictorial and symbolic language
- ☐ Culturally-specific differences regarding expected ways in which information is presented
- ☐ Cultural and country-specific aspects of the target group when using the information product and when using media
- ☐ Cultural and country-specific aspects of the target group which might impact use of the product
- ☐ Culturally-specific methods of working
- ☐ Country-specific aspects and requirements (e.g., linguistic, terminological, technical, organizational) that must be taken into account when creating information products for international markets.

☐ ▶ 1.4.3 Legal and normative requirements

Classify the individual teaching contents

Level 4: Teaching contents and learning objectives

1.4.2. Culturally-specific aspects of the target group

Culturally-specific differences in the way that information is processed (e.g., characters, colors, images, reading direction)

Cultural aspects of pictorial and symbolic language

Culturally-specific differences regarding expected ways in which information is presented

Cultural and country-specific aspects of the target group when using the information product and when using media

Cultural and country-specific aspects of the target group which might impact use of the product

Culturally-specific methods of working

Country-specific aspects and requirements (e.g., linguistic, terminological, technical, organizational) that must be taken into account when creating information products for international markets.

Online training and online certification for Technical Writers, based on the Competence Framework

TCTrainNet
TRAINING & CERTIFICATION

Contact us

Training and Certification for Technical Writers / Technical Communicators

TCTrainNet is an international training and certification program in Technical Communication, designed and managed by tekomp, the German professional association for technical communication.

It provides Technical Writers / Technical Communicators online training on entry and advanced level which can also be used as a preparation course for the international tekomp certification.

Benefits for...

TechWriters

- Discover exciting new aspects of your profession
- Acquire an internationally recognized professional qualification
- Keep your qualification up to date
- Use your certificate for marketing your skill
- Keep up with university graduates
- Increase your employability

Employers

- Define a qualification standard for your whole staff
- Establish comparable skill levels for international teams
- Get introductory training for your employees
- Leverage the flexibility of your staff members
- Agree on personal development schemes with your Technical Writers
- Make professional development a part of your staff retention program

Students

- Leverage your employability through specialization in Technical Communication
- Discover an inspiring and profitable profession
- Enter the world of content creation and media production
- Prepare yourself for successful job interviews

Any questions?

"If you have any questions, please feel free to contact our team for individual, professional support and consultancy. We will be glad to help in any way we can!"
